

Stop Bunchy Top

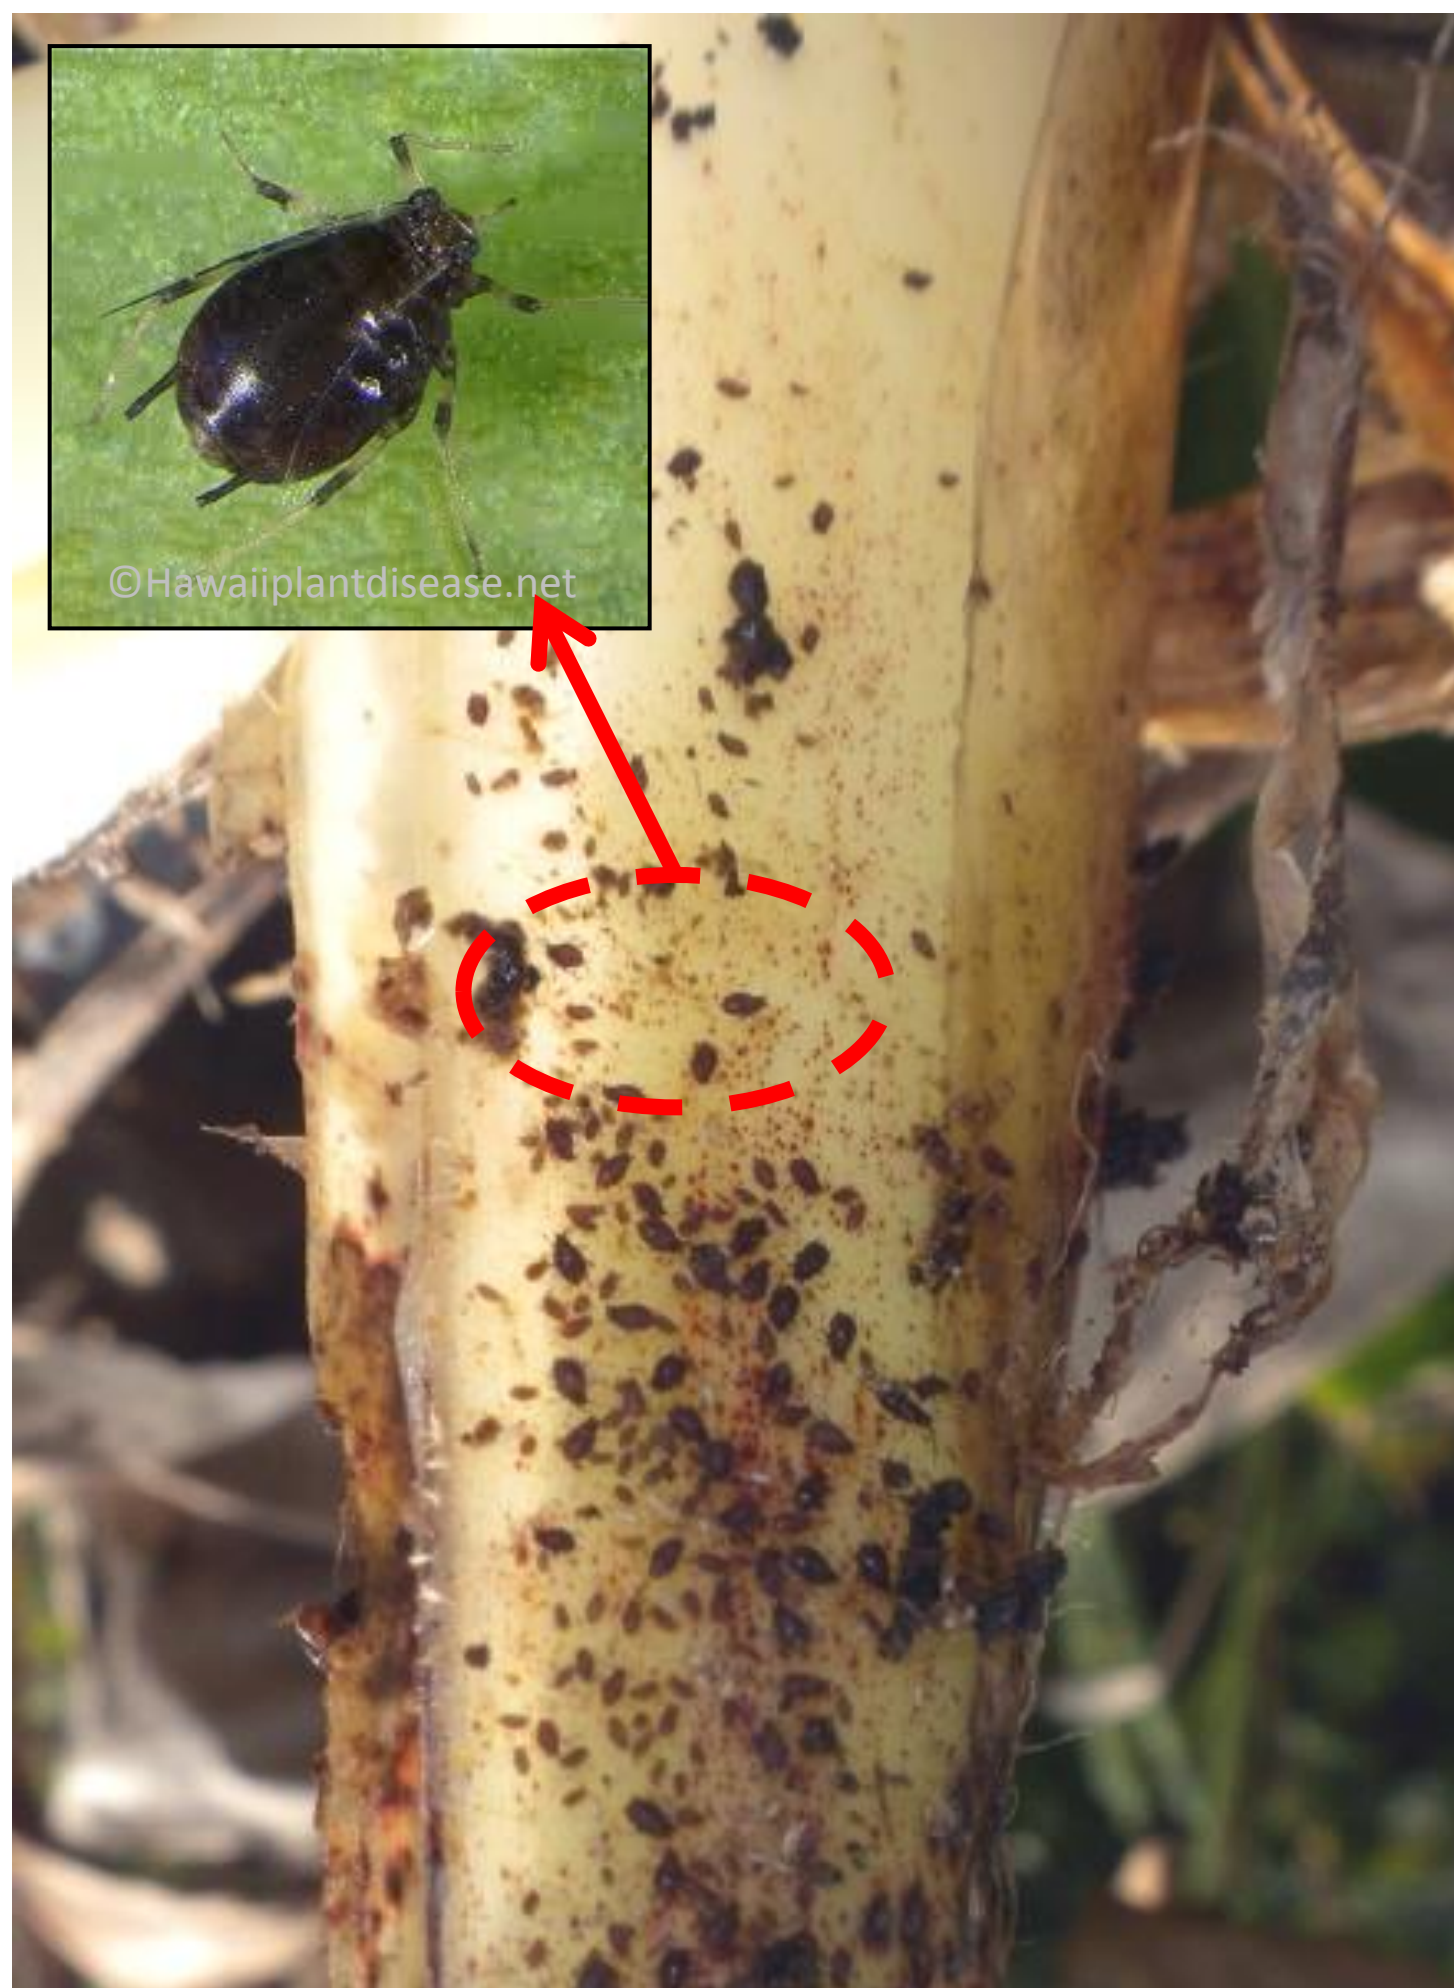

Aisan Kogboogun Ogede

Banana bunchy top disease (BBTD)

BBTD is a destructive virus disease of plantain and banana. Infected plants are bunched at the top and they do not produce any fruits. The disease spreads by aphid vector and suckers taken from infected plants. Do not move suckers from infected regions.

Control measures

- Prevention is the best option
- Do not use suckers from BBTD affected regions for planting
- Do not move suckers from affected regions
- Use only healthy suckers
